

According to actual tests (see results at [arrl.org](http://arrl.org)) BPL will interfere with radio communications. We will have to ask the other station to INCREASE their power in order to be able to hear them, and may in turn have to do the same. Not only will this interfere with Amateur Radio Communications, but it could very well cause interference to M.A.R.S. stations and other government communications. For as long as I can remember, the FCC has asked us to use the minimal amount of power necessary for communications. By approving the BPL, you would be encouraging us to have to increase our power levels to the maximum amount in order to facilitate communications, thereby increasing the potential for more interference to other services as well as our neighbors. Most of us have worked with our neighbors over the years to maintain good relations with our neighbors as well as to maintain good operating practices. Please consider carefully the path that you choose. Thank you Steve Roberts KG5QH
